IMAGEPRINT R.E.D. for Windows
Installing a Trial Version

It is strongly recommended that you disable any anti-virus software prior to installing. You may need to reboot your computer one to two times as part of the install process.

1. Double-click **ImagePrint_Installer.exe** to begin the installation.

2. Read the License Agreement, check the box for "I Agree", then click **Install**.

3. Installation files will be copied to your computer. During this process you may be prompted to reboot the computer one or two times, after which the installation will continue. When all files are copied, the **IPSetup** utility will launch.

4. In **IPSetup**, click **Add Printer**, then click **Continue** in the next window that appears.

5. Choose **Demo Mode**, click **Continue.**

6. Select **IMAGEPRINT R.E.D.** as the installation type and click **Continue.**

7. Select **Desktop** for printers 17" or smaller, or **Large** for all others. Click **Done**. Your ImagePrint R.E.D. driver will now be listed in the IPSetup window.

8. Close IPSetup by clicking the close (X) button in the upper right corner of the window.

9. Choose to **Quit** to exit the installer, or choose **Launch** to get started with ImagePrint R.E.D. right away. A DEMO watermark will appear on all prints until you purchase a license.

Whenever you want to use R.E.D. you can start it by clicking your Windows Start Menu and choosing **IMAGEPRINT** from the **ColorByte Software** program group. You can also launch ImagePrint R.E.D. directly from the IMAGEPRINT folder within your "Program Files (x86)" folder.

RECOMMENDED

Before you make your first print, we suggest you read through "Making your first print with IMAGEPRINT R.E.D." located in your IMAGEPRINT folder.

Additional Documentation

The complete IMAGEPRINT manual is a valuable reference for getting the most out of your software. You'll find a copy in the IMAGEPRINT folder (IMAGEPRINT Users Manual.pdf) or by choosing **Manual** from the IMAGEPRINT Help menu.
